## Clerks of the Superior Court.

Up to December 1, 1851, Baltimore City was a part of Baltimore County, and the County Court was at Baltimore. Hence, prior to that date, the Clerks named were Clerks of the County Court; and, after that, Clerks of the Superior Court of Baltimore City. In the office of the Clerk of this Court will be found the County Records for dates prior to December, 1851, at which time the City and County were constituted separate bodies politic.

From 1681 to 1753 the following were Clerks of the County Court, viz:

Thos. Hedge, H. W. Stokes,	H. Wriothesley, Talbot Ristean,	Roger Matthews, T. Brerewood,
From 1753 to	1769, -	Beale Bordley.
" 1769 to	1777, -	A. Lawson.
" Mch. 1777 to April	1832, -	Wm. Gibson.
" April 1832 to Feb'y	1833, -	Arad Israel.
" Feb'y 1833 to Feb'y	1845, -	Thos Kell.
" Feb'y 1845 to Nov. 30, 1851,	-	A. W. Bradford.

The following are names of the Clerks of the Superior Court

From Dec. 1851 to Dec.	1857, -	Edward Dowling.
	to June 7, 1858, -	Geo. E. Sangston.
	to Oct. 24, 1867, -	Alford Mace.
	to Feb'y 8, 1878, -	George Robinson.
	to July 26, 1882, -	Francis A. Prevost.
	to Nov. 30, 1883, -	R. T. Allison.

Dec. 1, 1883, James Bond, present incumbent.

## Indexes in the Record Office.

The recording of deeds, etc., is part of the duties of the Clerk of the Superior Court. The various instruments received to be recorded are indexed in books bearing appropriate titles, viz:

General Index to the Land Records,		
" " " Chattel Records,		
" " " Charters,		
" " " Mechanics' Liens,		
" " " Magistrates' Judgments,		
" " " Short Releases.		

The Index to the Land Records is the most voluminous, containing references to the book and page of the records of all instruments affecting the titles to real estate and kindred property. Originally there was but one system of indexing the conveyances in the Land Records in the Record Office, viz: the alphabetical. To this, however, has recently been added a locality index, called the "Block System." The Alphabetical, or General Index, extends back to the oldest record. Prior to 1865 both grantors and grantees were indexed in the same book, and the system of indexing was simply to use one letter of the alphabet as a head for each division, and to index under that head all conveyances to and from parties whose surnames began with that letter.

This system continued until 1865, when the "Vowel" System was applied to the Alphabetical Index, and Grantors and Grantees Indexed in separate books, *i. e.*: In one book

all conveyances were indexed as *from* the grantor *to* the grantee—this being called the Grantor Index. In the other, called the Grantee Index, the Contra Entry was made; being an index of the conveyances *to* the grantee *from* the grantor.

The separation of the alphabetical indexes into "Grantor" and "Grantee" has continued, and still obtains.

The Vowel System is a sub-division of surnames on the basis of the first or beginning letter, and the first vowel following that initial letter, in the name. For instance, the name Jones would be indexed under the sub-division Jo.; Brown, under Bo.; Champlin, under Ca., &c., &c.

This system continued until December 31, 1875, when the "Campbell" system of alphabetical index was adopted by the then Clerk of the Court.

This takes as a basis for sub-division the first letter of each surname, and the first letter of the given name of the same person. Under this system the name William Jones would appear under the heading J. W.; Samuel Williams, under W. S.; John Smith, under S. J., &c., &c. The first letter of the surname being first in the heading of each sub-division and the first letter of the given name following.

This was discontinued January 8, 1878, and the "Vowel" System again applied to the alphabetical indexes, and continued until December 31, 1886, when the present modified directory form of alphabet was adopted.

This has as a basis for sub-division the *first* and *second* letters of each surname only, and has been found to sufficiently sub-divide the large number of names daily indexed, having proven by practical experience the simplest and best for public use.

Under this system all conveyances in the name of Brown will be found under the heading Br.; Smith, under Sm.; Sappington, under Sa.; Abell, under Ab.; Wilson, under

Wi., &c., &c. It not being necessary to go beyond the first *two* letters of a name in order to know the proper heading under which it is indexed.

### THE BLOCK SYSTEM.

This system of indexing is so called because of the use of the city block or square as a basis for indexing, using the *locality of the property* instead of the names of the parties to a conveyance as a means of reference.

The peculiar merit of the system is that much valuable time is saved in searching indexes. With any alphabetical index it is necessary to search the names of the parties for such number of years as may be required, with the attendant liability to error occurring from the mass of entries through which the searcher must wade.

With the "Locality" or Block Index, the search is confined to the limits of the city block in which the property in question is situated, thus minutely dividing the labor and effecting a great saving of time, while lessening the liability to error.

This system was authorized by an Act of the General Assembly of Maryland (Ch. 289, Acts 1886.) Mr. James Bond, the clerk of the court, prepared and submitted to the Supreme Bench for their approval, as required by the Act, the present form of block or locality index used in the Record Office; and, it having received the unanimous approval of the Bench, work on same was begun on the 1st of January, 1887, and on January 1, 1893, this great work was announced as completed.

The Block Indexes cover a period of forty-three years, extending from December, 1851, to the present time, and all current work is now indexed in the Block, as well as in the general or alphabetical index.

Briefly, the plan of the Block Index is as follows:

The city is divided into 2073 blocks, or squares (Poppleton's Map being used for the purpose.) Each of these blocks, or squares, is bounded by well-defined streets, and each is given a number. For instance, the square bounded by Charles, Lexington, St. Paul and Fayette streets is a block, and is number 623 on the map. The index books each contain a certain number of pages, numbered to correspond with the block numbers on the map. The numbers of the blocks contained in each book are plainly marked on the outside.

When any conveyance affecting property in any particular block is received, an index of the same, with a short description of the property and a reference to the record book in which the conveyance is recorded, is placed on the page (or its continuation) which corresponds in number to the block number on the map of the block, or square, in which is situated the property affected by the conveyance.

Thus, if you wish to search for conveyances of a lot (or house) say on the south side of Lexington street, between St. Paul and Charles streets, you first refer to the map, which hangs in a conspicuous place in the Record Office, and find that your property is in Block "623." Then go to the case containing the block books, or, as they are called, "Indexes to Located Conveyances," and take down the book containing that block; turn to page 623, and on that page (or its continuations) will be found all the conveyances affecting property in Block 623 for all the years from the present back to December, 1851.

There may be several pages to Block 623, and it is necessary to be careful to start with the first one bearing that number.

In a column headed "Location of Property" is written a short description of the property conveyed, in each instrument. For illustration, the following sample entry will show what is meant:

BLOCK 623.

1851.	Grantor.	Grantee.	Instrmt.	Location.	Liber & Folio.
Dec. 1.	Brown, John	Green, James.	Deed.	s.s. Lexington, 40 w. St. Paul. w. 40, s. 150, e. 40, n. 150.	1. E. D. 142.

It is only necessary then to search the location column in this block, for this particular lot, in order to find the conveyances affecting it.

There is a necessary adjunct to the Block Books called the "Index to Unlocated Conveyances," for the purpose of indexing all conveyances of a general nature, or such as do not describe the particular property conveyed, or such as describe it in such a way as to render impossible its proper location in any particular block.

This index is of necessity alphabetical in form, and is kept according to the "modified directory" plan, described under the head of "Alphabetical Indexes." It is essential, therefore, to run the "unlocated" index after (or before) searching the block to catch such general or particular conveyances affecting the property in question, as may not have been susceptible of being "blocked" when received for record.

The percentage of "unlocated" conveyances is very small, and very little time, indeed, suffices for searching this index for general and miscellaneous conveyances.

#### BELT OR ANNEX INDEXES.

Also to be considered under the head of "Indexes to the Land Records" are those to "Records of Conveyances of Property in the Annexed Districts," called the "Belt."

On June 1, 1888, the Act of Annexation took effect, and since that time of course all conveyances affecting property in those districts have been recorded in the Office of the Clerk of the Superior Court of Baltimore City.

These conveyances have been indexed in the General Alphabetical Index to Land Records in the same manner as all others; but as it was found at the time of annexation impracticable to block the Belt, they have not been indexed in the Block system, which at present applies only to the property within the old city limits (or the limits prior to June 1, 1888.) The reference to conveyances of Belt property, however, has been facilitated by keeping, in addition to the entry in the general alphabetical, where all conveyances affecting land are indexed, a supplemental alphabetical index, called the "Index to Conveyances in Annexed Districts," and indexing therein all Belt conveyances, and them only.

Thus the searcher is enabled to search for reference to a title in the "Belt" without going through the mass of names in the General Alphabetical Index, and the "Belt" conveyances can more readily be segregated in the future, for the purpose of applying the Block System thereto.

This index is in the same form in which the General Alphabet is now kept, *i. e.*, the "modified directory," or subdivision on basis of first two letters of surname.

#### CHATTEL INDEXES.

The chattels began to be separately indexed in 1742. Up to 1892 the single letter system of index was used; that is, the first letter only of surname was made the basis of subdivision. From 1892 forward the same system as is now used in the General Alphabetical Land Index is used.

All the chattel indexes are alphabetical, of course (bargainers and bargainees indexed in same book), from 1742 to present time.

#### CHARTER INDEXES.

Previous to the year 1851 the charters were recorded in the Chattel Records, and indexed with the chattels in the General Chattel Index. In December, 1851, they were first recorded separately, in Charter Records, but there was no General Index of Charters, there being only the small index attached to and a part of each separate charter record until August, 1868, when a General Charter index was begun, and continued from that time on. This index is on the single letter subdivision plan, the *first* letter of the corporate name being used as a basis. Thus, the "Round Top Manf. Co." is indexed under the letter "R.," the "Trustees of the German Reformed Church," &c., under "T.," the "Warren Land Co." under "W.," &c., &c.

#### GENERAL INDEX TO MECHANICS' LIENS.

A few years ago the present clerk of the Court prepared and put in use a General Alphabetical Index to Mechanics' Liens, from 1883 forward. This is on the "modified directory" plan, already explained.

The names of the *defendants* only are indexed.

#### MAGISTRATES' JUDGMENTS.

A General Alphabetical Index to the Defendants in all Magistrates' Judgments recorded in the office of the Clerk of the Superior Court since 1860 has been prepared and put into use by the present Clerk of the Court. This is on the same plan as index to Mechanics' Liens.

#### SHORT RELEASE INDEX.

Since the year 1883, Short Releases, *i. e.*, those made by the mortgagee at the foot of the record, or there recorded from endorsement in short form on the original mortgage, have been separately indexed. No entry of them appears on the General Alphabetical Index to Land Records; but there is a General Index to "Short Releases" from 1883 forward, kept in the "single letter" division style, the first letter of the surname of the mortgagee, or party releasing the mortgage furnishing the basis.

This index is only one way, as the name of the mortgagor is not indexed.

This separation of Index to Short Releases from those to other conveyances refers only to the General Alphabets.

In the Block System, Short Releases are indexed in the Block, (or unlocated Index, as the case may be) the same as other conveyances.

Package or Original Plats.

---

---

## PACKAGE OR ORIGINAL PLATS.

---

These are Copies of Original Plats, filed in the Office of the Clerk of the Superior Court.

Each plat is in a separate paper cover, bearing a number. Several of these covers or packages are placed together in a canvas pocket to protect them from dust. These "pockets" are marked with the numbers of the plats contained therein.

The reference here is to the number marked on paper cover of each plat.
